AES60, EBU Tech 3293 v.1.8
EBU Core Metadata Set
Introduction
The core set of metadata presented in this specification is a co-publication of EBU Tech3293 v. 1.8
EBU Core
EBUCore has been designed to describe audio, video and other resources for a wide range of broadcasting applications including archives, exchange and production in the context of a Service Oriented Architecture. EBUCore is based on the Dublin Core to maximize interoperability with the community of Dublin Core users such as the European Digital Library 'Europeana'. EBUCore 1.8 takes into account latest developments in the Semantic Web and Linked Open Data communities. A link to EBUCore RDF ontology and its documentation is provided in the "download zone". The EBUCore RDF ontology has been updated to match EBU's CCDM (Tech 3351) needs and improve mapping with other ontologies. EBUCore RDF is listed as Linked Open Vocabulary as well as
